A Vertical Approach

Five Ten's roots trace back to Yosemite and Joshua Tree National Park. Charles Cole, Five Ten's founder and president, started the company in 1985. At the time, he was a footloose, 30-year-old climbing bum whose motto was "one with the dirt." All climbers need rest days and Cole's were well spent, earning him an engineering degree from University of Southern California and an MBA from the University of Michigan, Ann Arbor.

Raised in Southern California, Cole paid his climbing dues on the rough rock of Joshua Tree. Like many of his climbing contemporaries, he turned his sights to vast walls of Yosemite. Many of Cole's first ascents, including the False Shield and Jolly Roger on El Cap, and Space, Queen of Spades and Autobahn on Half Dome, remain test pieces today.

In July of 1985, after a particularly exhausting solo marathon up the Steck Salathe, Cole, in his hurry to return to Camp 4, had a near-miss slip while descending. By the time he safely reached the

ground he had formulated a plan and Five Ten was born. The name Five Ten refers to the Yosemite Decimal System, a rating scale used to determine the technical difficulty of a climbing route.

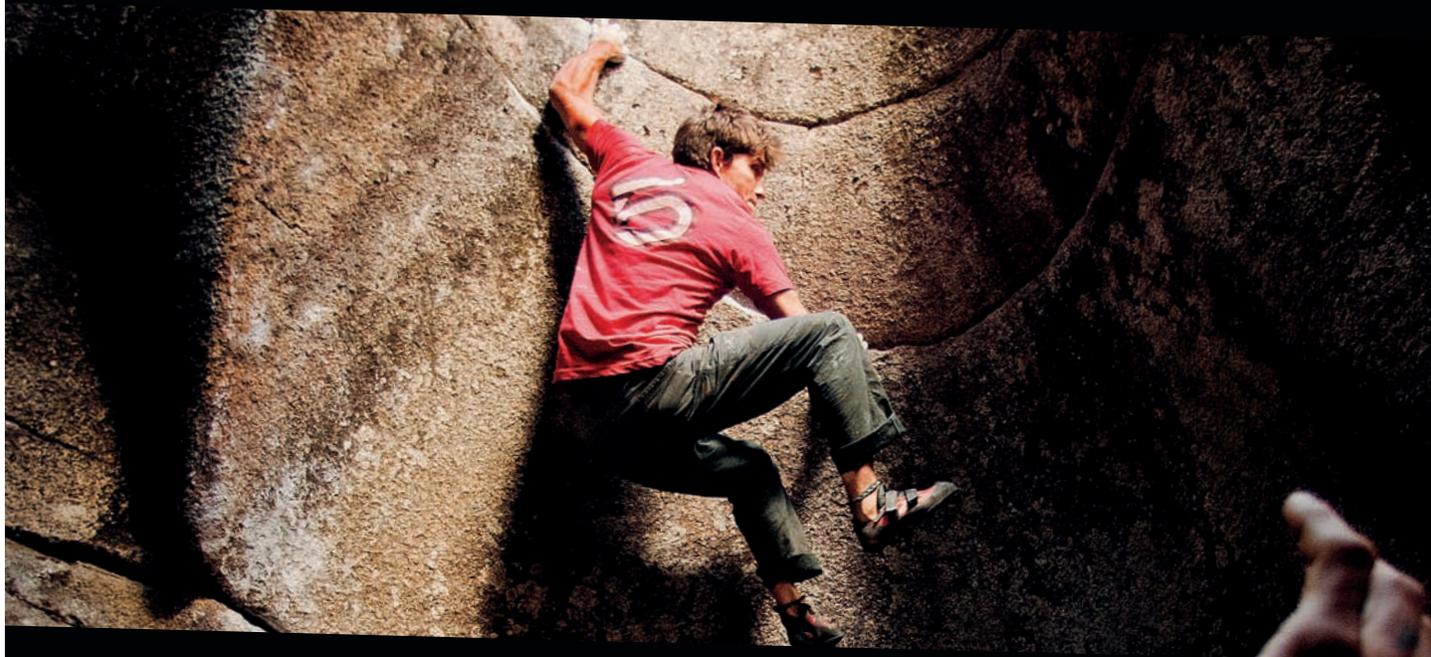

Approaches and descents are often the most dangerous parts of the climb, made even more treacherous by the slick-soled sneakers that climbers use to wear. In school, and on the walls, Cole often contemplated why the existing climbing rubber was inadequate (one best-selling shoe at the time utilized old airplane tires for soles). Working with some of California's leading scientists and experts in the field, Cole immediately started developing Stealth high-friction rubber. Five Ten's first rubber compound, Stealth S1, revolutionizing climbing due to its tenacious grip and durability. The original Five Tennies created the approach shoe category, providing climbers with traction and sure-footed dependability on approaches and descents. Athletes soon established Stealth as the benchmark in high-friction footwear. There are currently nine Stealth compounds, each formulation offering distinct tuning attributes. Athletes can now pick the best rubber solution for their specific sport.

By the late 1990s, mountain bikers had discovered what climbers already knew—Five Ten and Stealth Rubber improved performance. Since then, riders with Five Ten shoes have dominated the Downhill World Cup Circuit, become the go-to footwear for bike guides around the globe and become the favorite of urban trick riders like Danny MacAskill. For 2013 Five Ten continues its tradition of innovation with the Freerider Vxi and new Stealth Contact solution for pedal dynamics.

YOUR GUARANTEE OF EXCEPTIONAL PERFORMANCE ON ANY ANGLE TERRAIN.

CLIMB

Stonelands | The Firsten Last Story

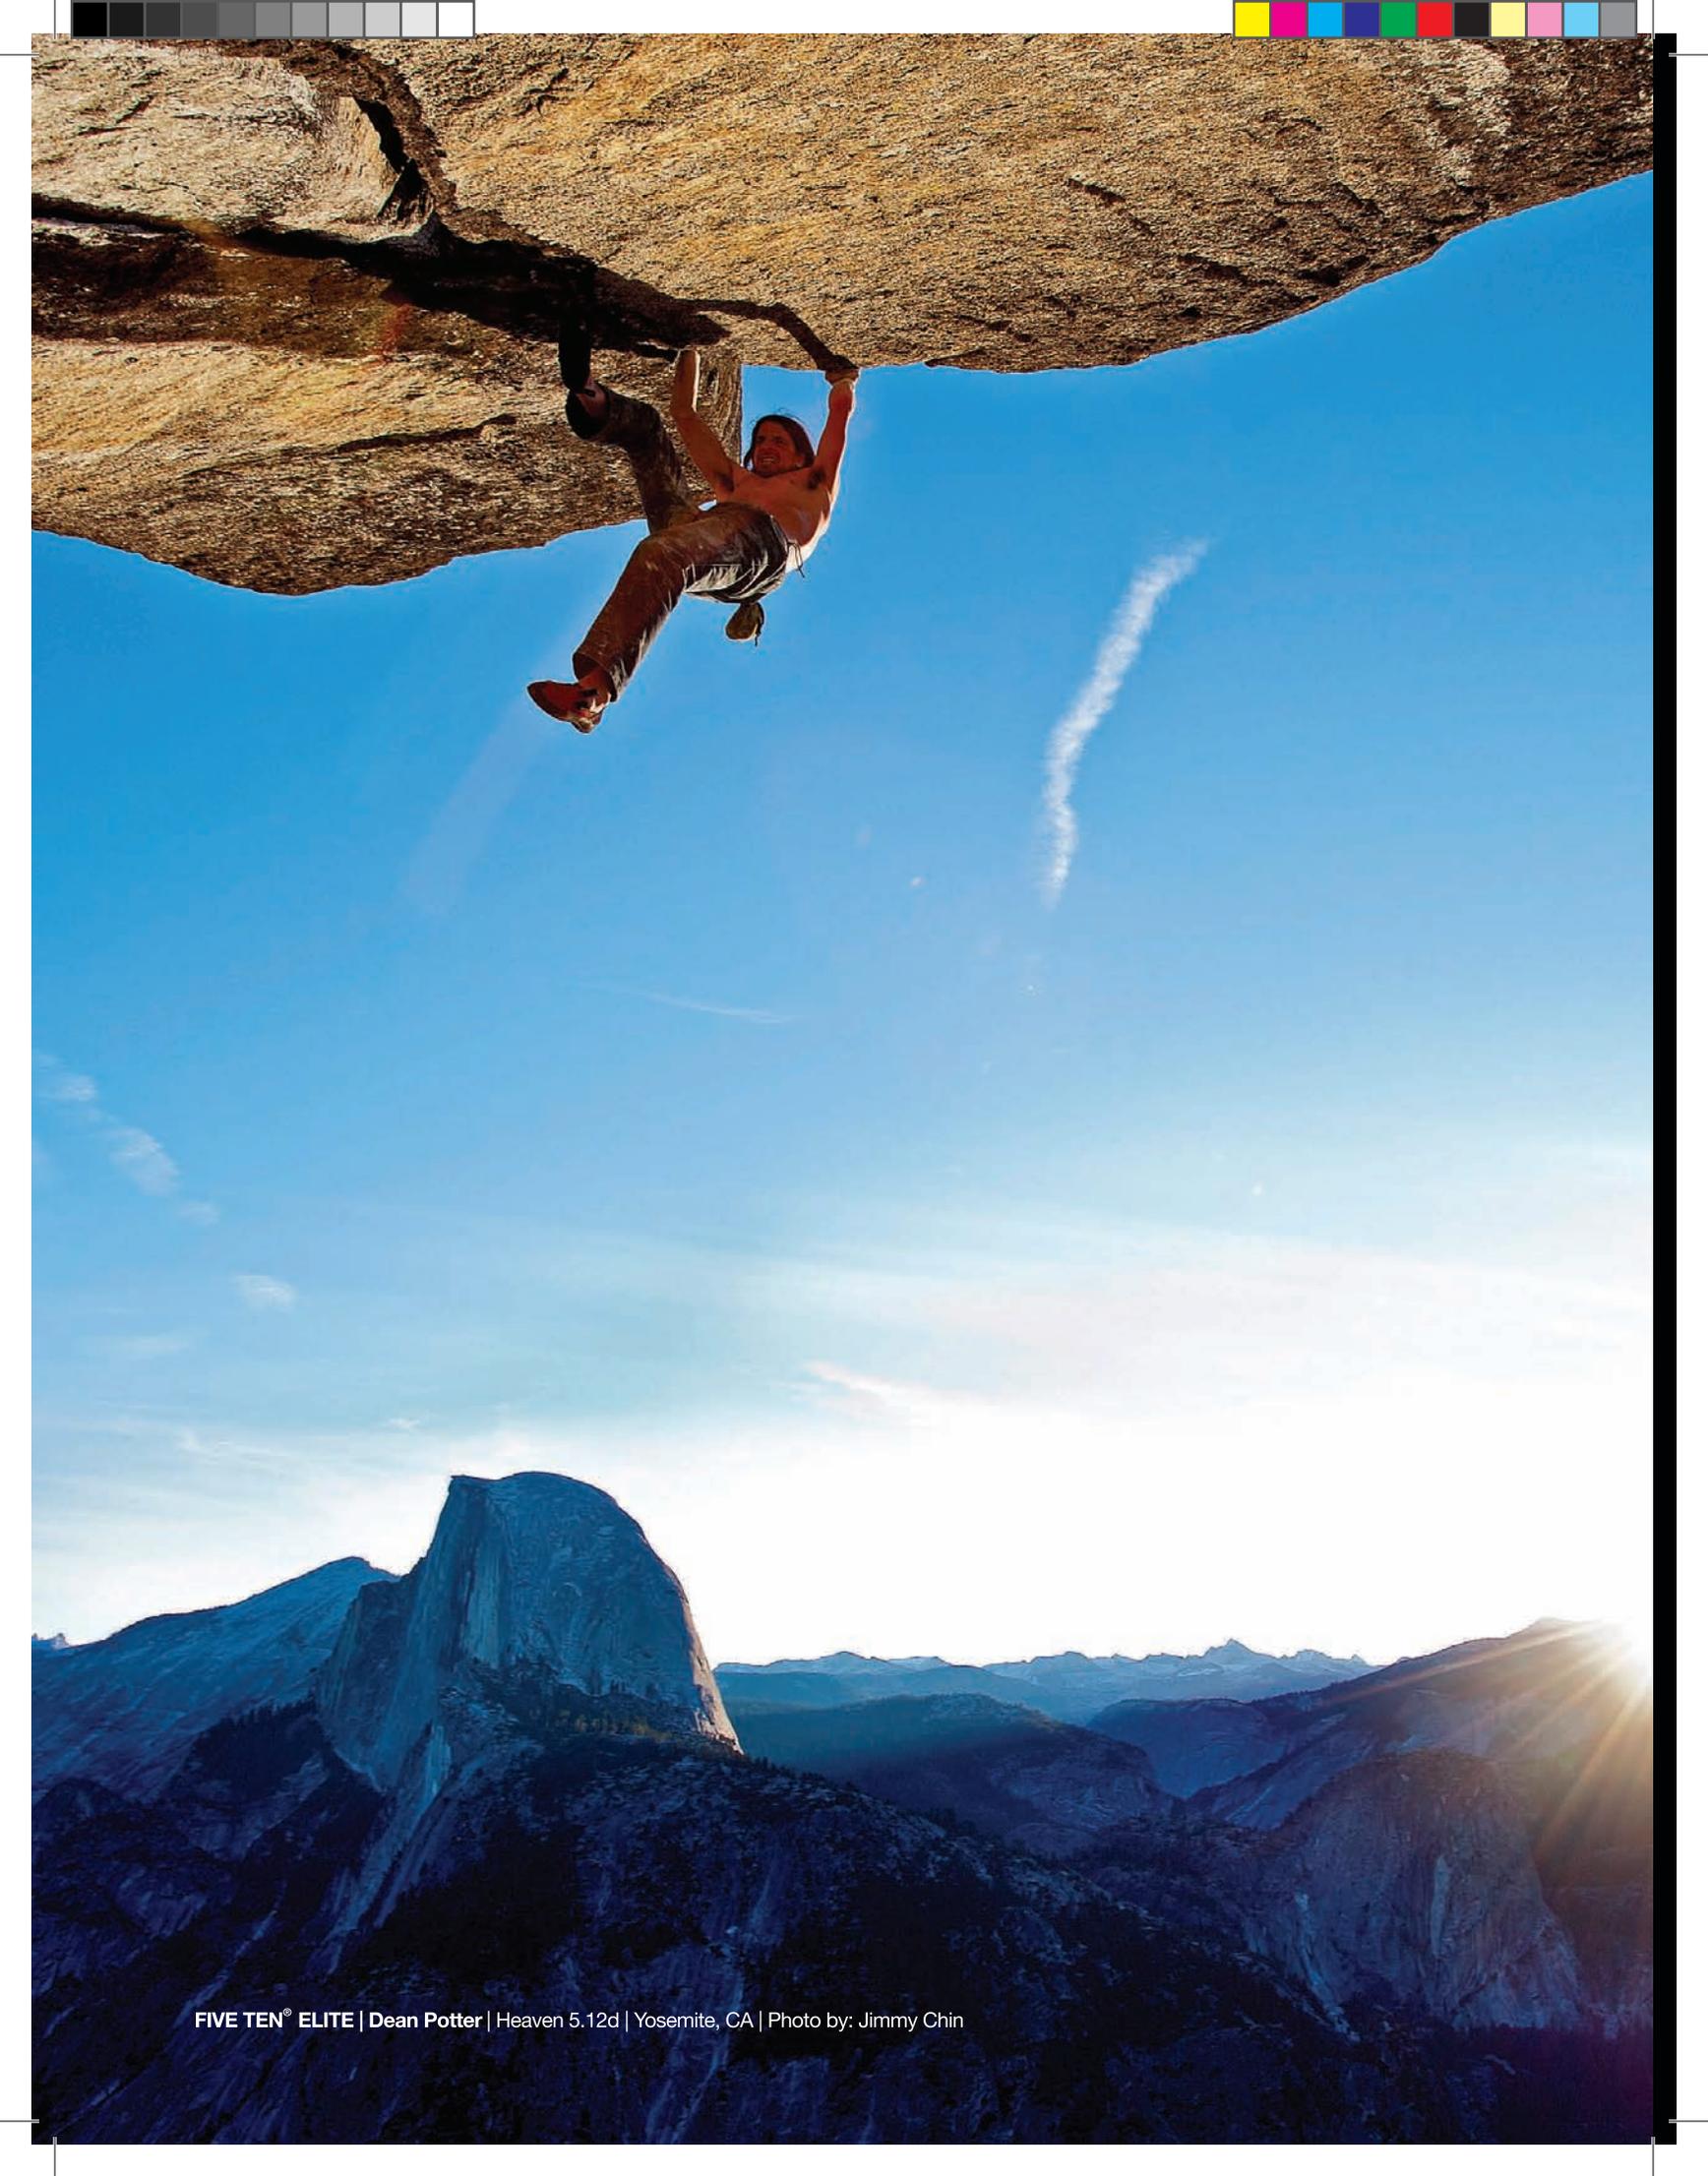

Five Ten lasts are legendary for their performance—innovation is the center of our DNA. We created the first down-turn, reverse-rocker climbing shoe, the UFO, in 1992. The Anasazi Last introduced the performance shoe category, paving the path for the world's most difficult climbs and new Firsten Last. **(Page 5)**

BIKE

Dreams of Floating | Stealth Contact

For spring/summer 2013, Five Ten is upping the ante with the new Freerider Vxi. The Vxi introduces offers true innovation with the new Stealth Contact outsole. Treadless under the ball of the foot for superior float, with legendary Freeride Dotty tread on the heel and toe, the shoe is a more precise way to adjust the foot on the fly without tread obstruction. **(Page 27)**

FIVE TEN® ELITE | Dean Potter | Heaven 5.12d | Yosemite, CA | Photo by: Jimmy Chin

The Firsten Last Story

Five Ten has dominated technical climbing footwear for the past three decades. Partial credit goes to Five Ten's standard-setting Stealth Rubber soles, extensive research & development and cutting-edge athletes. The other ingredient is the unique, innovative lasts that have revolutionized the design and fit of climbing shoes.

Lasts make a difference. Basically, a last is the foot-shaped structure around which the shoe is built. The shoe's fit and performance correlates directly to the last's volume and shape. Each last cradles your foot in a specific position, passing along specific performance advantages to the athlete.

Five Ten lasts are legendary for their performance—innovation is the center of our DNA. We created the first down-turn, reverse-rocker climbing shoe, the UFO, in 1992. The Anasazi Last introduced the performance shoe category, paving the path for the world's most difficult climbs. Recognizing the unique shape of women's feet, Five Ten engineered the first women's-specific climbing shoe last. Addressing the need for more rubber on the rock, the Prism Last was born, with its patented multi-faceted toe design. For spring 2013 (drum roll please), Five Ten introduces the new Stonelands Last. The new last is designed to reward performance without robbing comfort. Charles Cole, Five Ten founder, president and chief engineer was inspired after a week of climbing at Joshua Tree National Park, Five Ten's backyard crag. After a day of climbing cracks, smears and overhangs, the new last concept crystallized—a blend of Cole's artistic passion and engineering precision. His natural inclination toward innovation led him to reexamine the foot's anatomical properties.

Cole knew that people have the most fun when they perform at their best. If shoes hurt, it's impossible to push hard. You could climb in loose-fitting sneakers, but performance plummets. Starting with the foot's natural position, the Stonelands Last fills the shoe with the foot, rather than forcing the foot to fit the arbitrary shape. The top of the last is ground down, to reduce volume, which encourages a flat-toed position. The new last is thinner and wider than traditional lasts, making it ideal for finger cracks and multiple pitches. The Stonelands Last also reduces shoe spin—meaning that the shoe stays more firmly in position on the foot, even when torqued into tortuous positions. A cylindrically lasted shoe may roll, while the thinner, lower volume Stonelands edges and smears with solid precision. The shoe is not cruel to the feet. We realize it's a rebellious idea, but that's what Five Ten is all about.

Stonelands

Flat Foot Position

Knuckled Position

Features & Benifets

① Volume

The Firsten Last fills the shoe with the foot, rather than forcing the foot to fit the arbitrary shape.

② Comfort

The top of the last is ground down, to reduce volume, which encourages a flat-toed position.

③ Performance

The top of the last is ground down, to reduce volume, which encourages a flat-toed position.

④ Non Cylindrical

reduces shoe spin—meaning that the shoe stays more firmly in position on the foot, even when torqued into tortuous positions.

⑤ Asymmetrical

The new last is thinner and wider than traditional lasts, making it easier for the shoe to conform to the foot.

Blackwing

(M) 5004 / (W) 5003 | US: (M) 5-13 UK: (M) 4-12 | US: (W) 5-10 UK: (W) 2.5-7.5

Think Dragon with a Velcro® closure. Our top competitive climbers swear by the Blackwing's precision and power. Yet you don't have to be racking up 5.14s to appreciate the Blackwing's exquisite blend of support and comfort. The padded tongue has a super-soft, fleecy microfiber lining that wicks sweat preventing hot spots. The gently downturned outsole helps you pull into the rock, like a monkey uses its feet. The Blackwing has a glove-like fit with easy entry.

TEAM BLACK

Team 5.10

5001 | US: (M) 6-12 UK: (M) 5-11

Five Ten's Elite Climbing Team is the best in the world. To help with their exploits, we are proud to introduce the new Team Five Ten. This "secret weapon" of a shoe features ultra-thin Stealth Mystique™ rubber that lets you feel the rock like never before, with unparalleled control for microscopic edges and invisible smears. We've made the elasticity of the entry easier, so that the shoe slides on for a glove-like fit. Climbers with TEAM experience will notice the new, ultra-thin toe patch that lets you nail hooks you'd only dreamed of.

PURPLE

Quantum

5005 | US: (M) 2-13 UK: 1-12

The iconic Anasazi Lace-up has made a QUANTUM leap into the future. Our Quantum is built on a high-performance last with a downturned toe that's designed for caves and steeply overhanging routes. The new low-volume heel cup not only enhances fit, it sticks to heel hooks like duct tape. Other features include a precision fit lace closure, a durable Cowdura™ upper, high-friction Stealth Onyx™ outsoles and ultra durable Mystique™ rands.

TECHNICAL FEATURES:

Stonelands | Climbing

"When things look bad and it looks like you're not going to make it, then you gotta get mean. 'Cause if you lose your head and you give up then you neither live nor win."

-The Outlaw Jose Wales

Because living and winning are essential parts of climbing, we introduce the Stonelands Series. As climbers, we take the road less traveled. We make our own rules. If there's a mountain in our way, we climb it. All an outlaw needs is a notorious reputation, a thousand-yard stare, a strict code of honor and a sturdy pair of boots. We provide the boots and the Brand of the Brave code; the rest is up to you.

 RED ROCK/BLACK

Stonelands VCS

5014 | US: (M) 5-13, 14 UK: (M) 4-12, 13

We designed the Stonelands for those who aren't mainstream climbers. Built on an all-new last, the Stonelands has a notoriously comfortable fit that belies its inner strength, just like the climbing legends of the past and present. The split-grain leather upper conforms to the foot like a second skin. Inside is Five Ten's secret performance weapon, our new Western Heel Cup and Midsole stiffener.

TECHNICAL FEATURES:

Stonelands Lace-up

5016 | US: (M) 5-13, 14 UK: (M) 4-12, 13

Built on our new Stonelands Last, the Lace-Up is a high-performance tool that's designed to take climbers from their local gym to Hueco Tanks to long routes in the Alps. The Stonelands Lace-Up is truly the shoe to wear when you're looking for trouble. Inside the Stonelands Lace-Up is a synthetic sock for all day comfort; underneath is a supportive midsole for edging precision and both lateral and medial control. The new last cradles the foot in a flat-toed position for power and comfort.

TECHNICAL FEATURES:

Dreams of Floating

Five Ten introduced the world to high-friction Stealth rubber nearly 30 years ago. At first it was rock climbers, alpinists and avid hikers who took advantage of the technically-advanced, high-friction footwear. But as quickly as a climber can leap from one outcrop to the next, other adventure athletes demanded shoes for their own sports. Then, like now, rock climbers were multi-sport athletes. They kayaked down waterfalls and explored single tracks with their mountain bikes. It was obvious that the relationship between the athlete and the brand had become a way of life.

In the bike world, word spread like wildfire that Stealth upped the performance of flat pedals. In 2000, the first flat pedal mountain bike shoe with Stealth Rubber soles was backordered a month before it hit the shelves. Downhill legend Chris Kovarik raced with prototype Stealth-soled shoes in the 2002 World Cup, winning the overall title. The same year, Sam Hill was crowned Junior World Champion using his Five Tens. In 2003, Nathan Rennie captured the overall UCI World Cup title wearing Five Ten, while Sam Hill demolished the junior men's field to defend his title—despite an epic crash in his final run. Over the next decade, riders wearing Five Ten shoes crushed the podium in downhill races, with Minnaar, Rennie, Hill and Kovarik leading the pack. In 2009, Minnaar woke up the bike world with the introduction of his signature Five Ten shoe, a category embraced by clip-in riders worldwide.

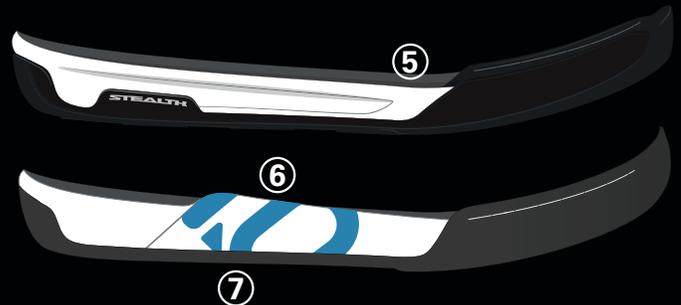

For spring/summer 2013, Five Ten is upping the ante with the new Freerider VXi. The VXi introduces offers true innovation with the new Stealth Contact outsole. Treadless under the ball of the foot for superior float, with legendary Freeride Dotty tread on the heel and toe, the shoe is a more precise way to adjust the foot on the fly without tread obstruction. Stealth outsoles also provide up to six times the vibration dampening of other rubbers—significant for drops and trick riding. Stealth® Contact™ represents the next generation in Five Ten bike innovation—a technology that's sure to dominate the World Cup circuit, bike parks and the urban commute categories.

Stealth® Dotty Contact | Technology

Outsole Features

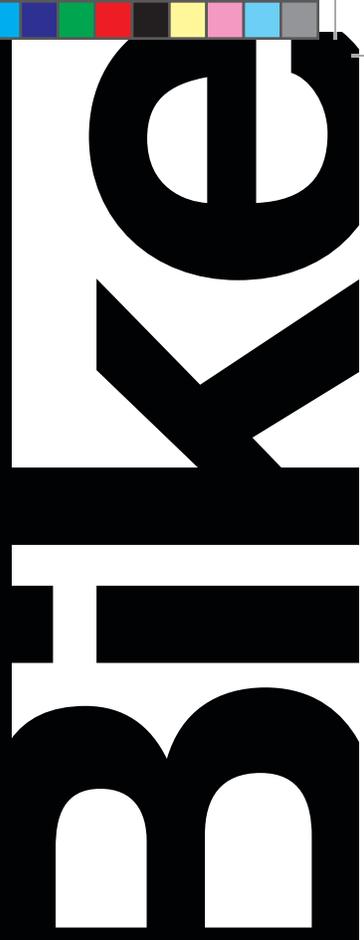

- 1 Original Dotty Tread**
This is the tried and true tread used on most of our iconic downhill and outdoor shoes such as the Impact, Karver, Guide Tennie
- 2 Pineapple Tread**
This newly developed tread works to avoid slippage when pushing bikes on angled dry / wet dirt terrain.
- 3 Float Tread**
This flat surface provides the best contact to pedal. Making it easy to shift (float) shoes to best angle for the terrain with no resistance from tread. The Float tread also allows for pedal pins to sink deeper into rubber.
- 4 Asym Grooves**
The Asym Grooves let the outsole give the least resistance to the contours of your foot. This makes for a more comfortable foot like stride when walking and pedaling.

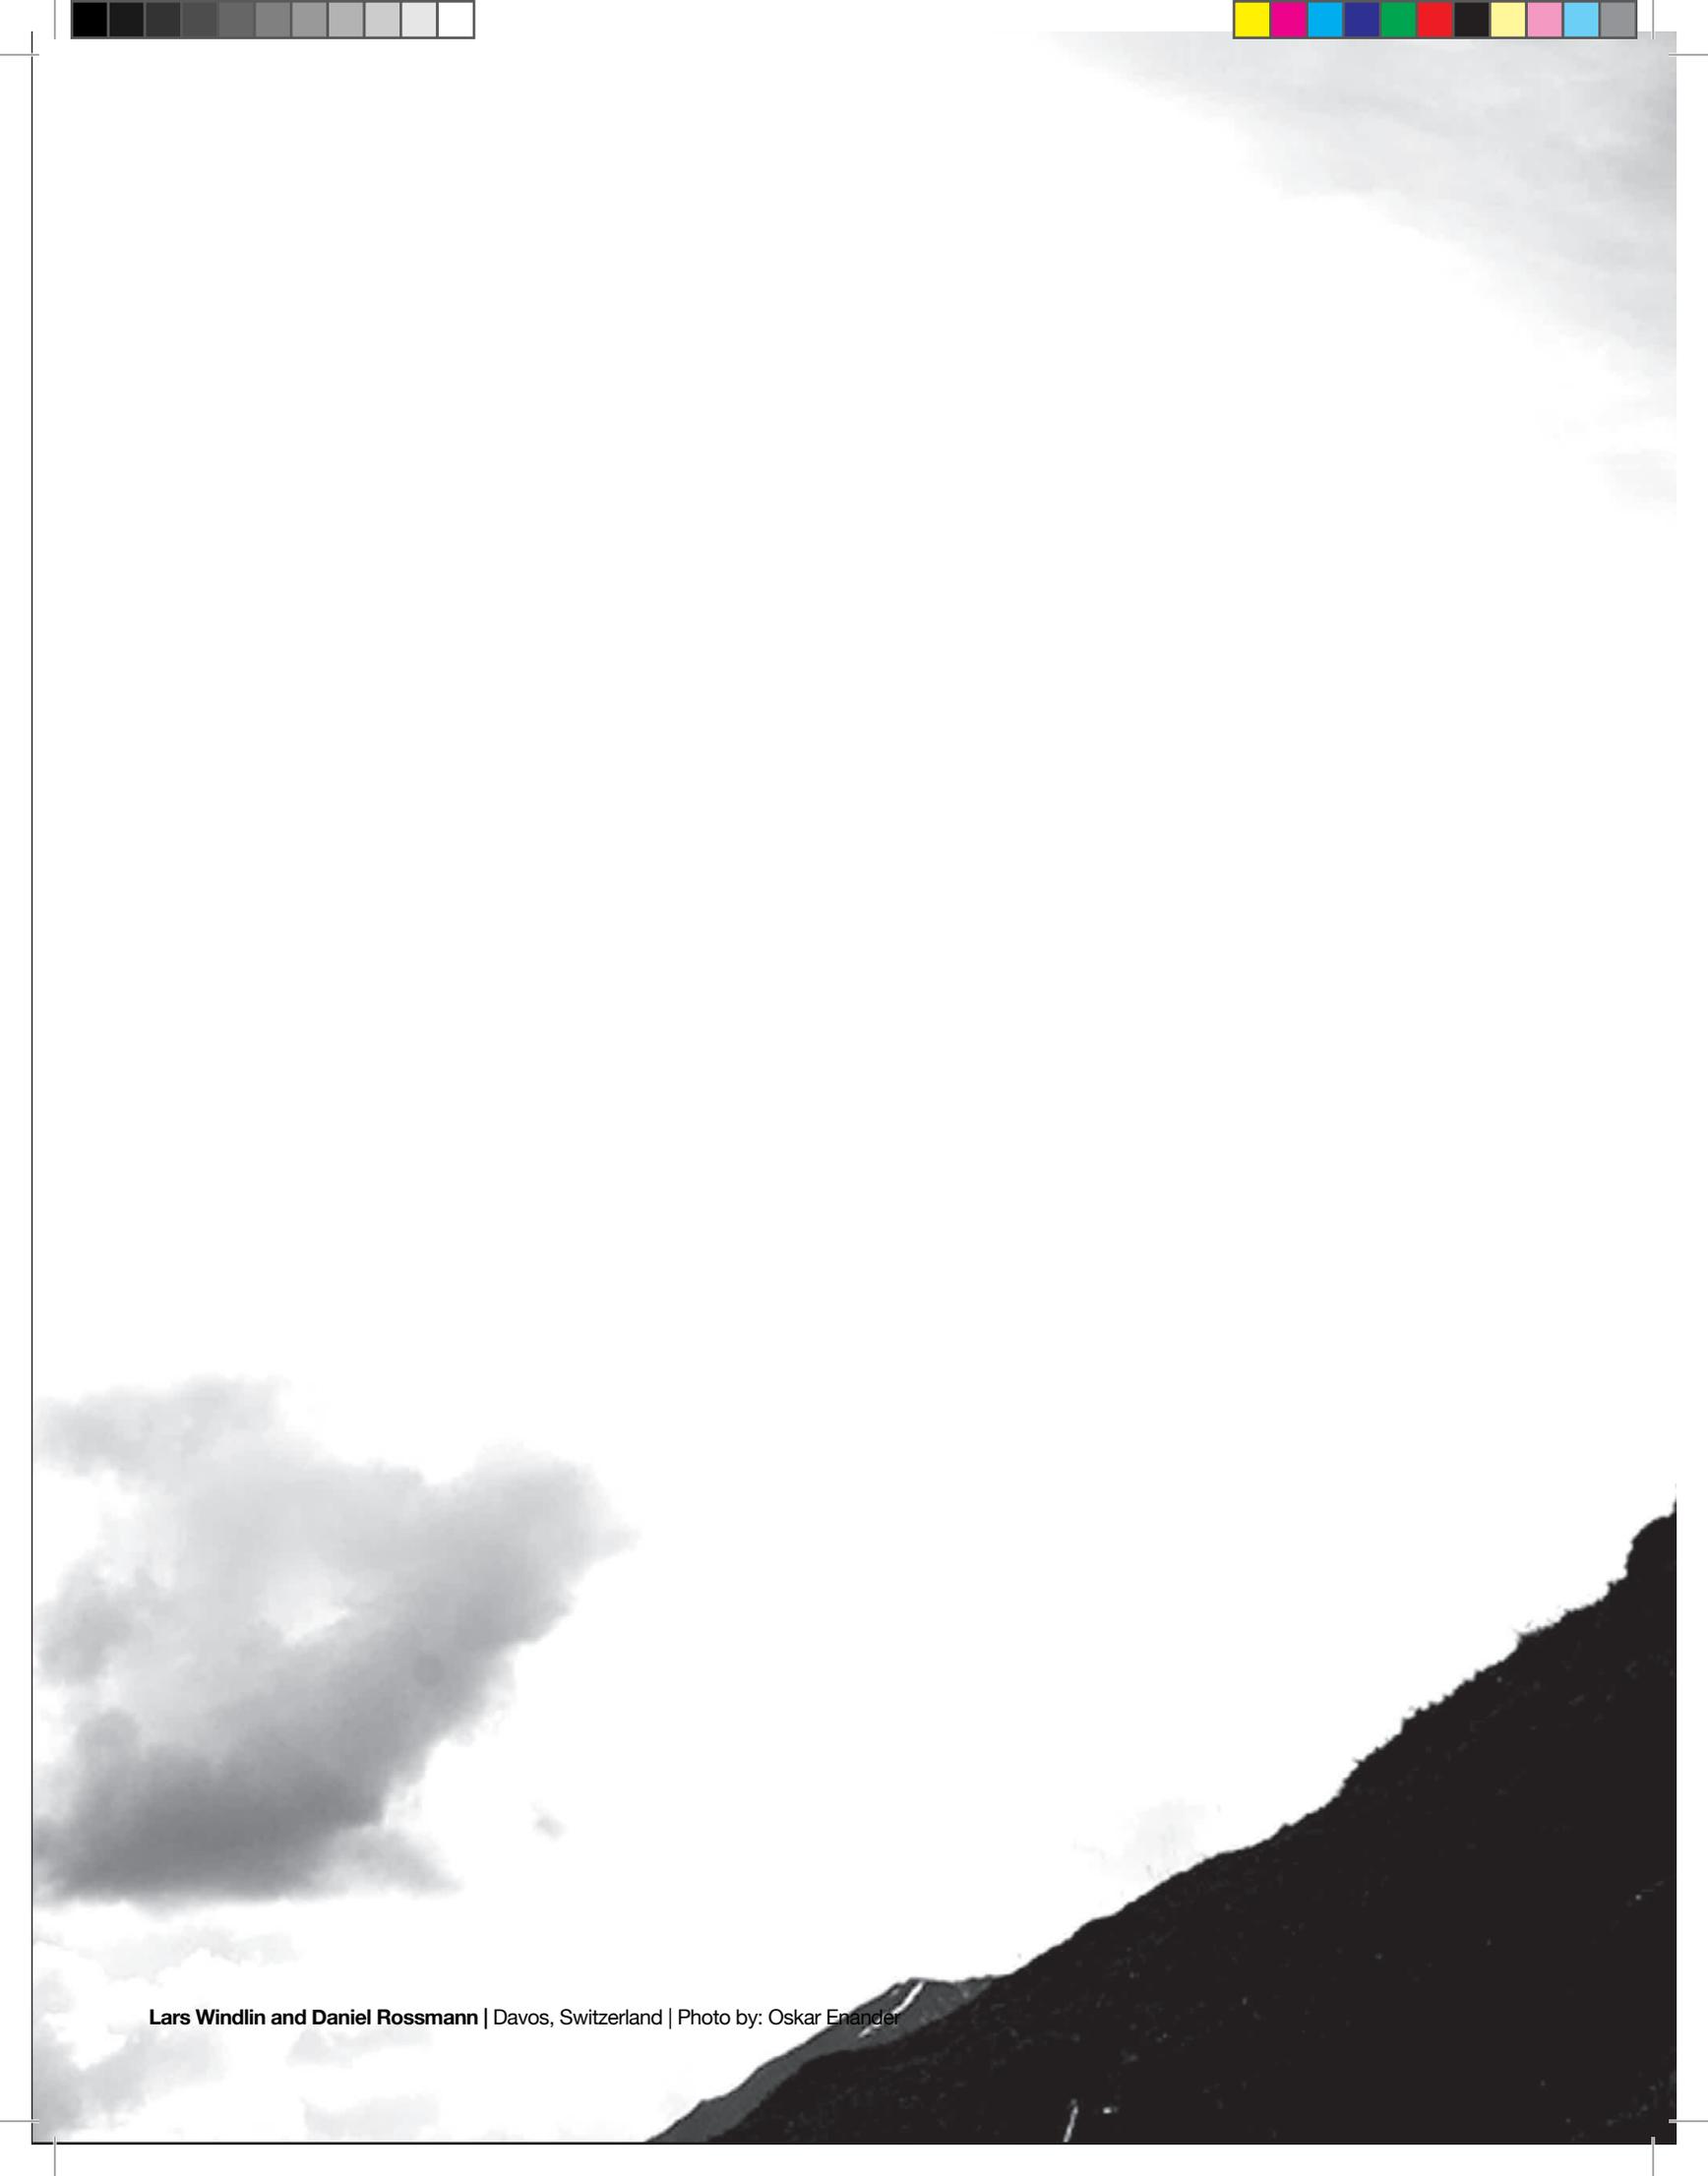

Midsole Features

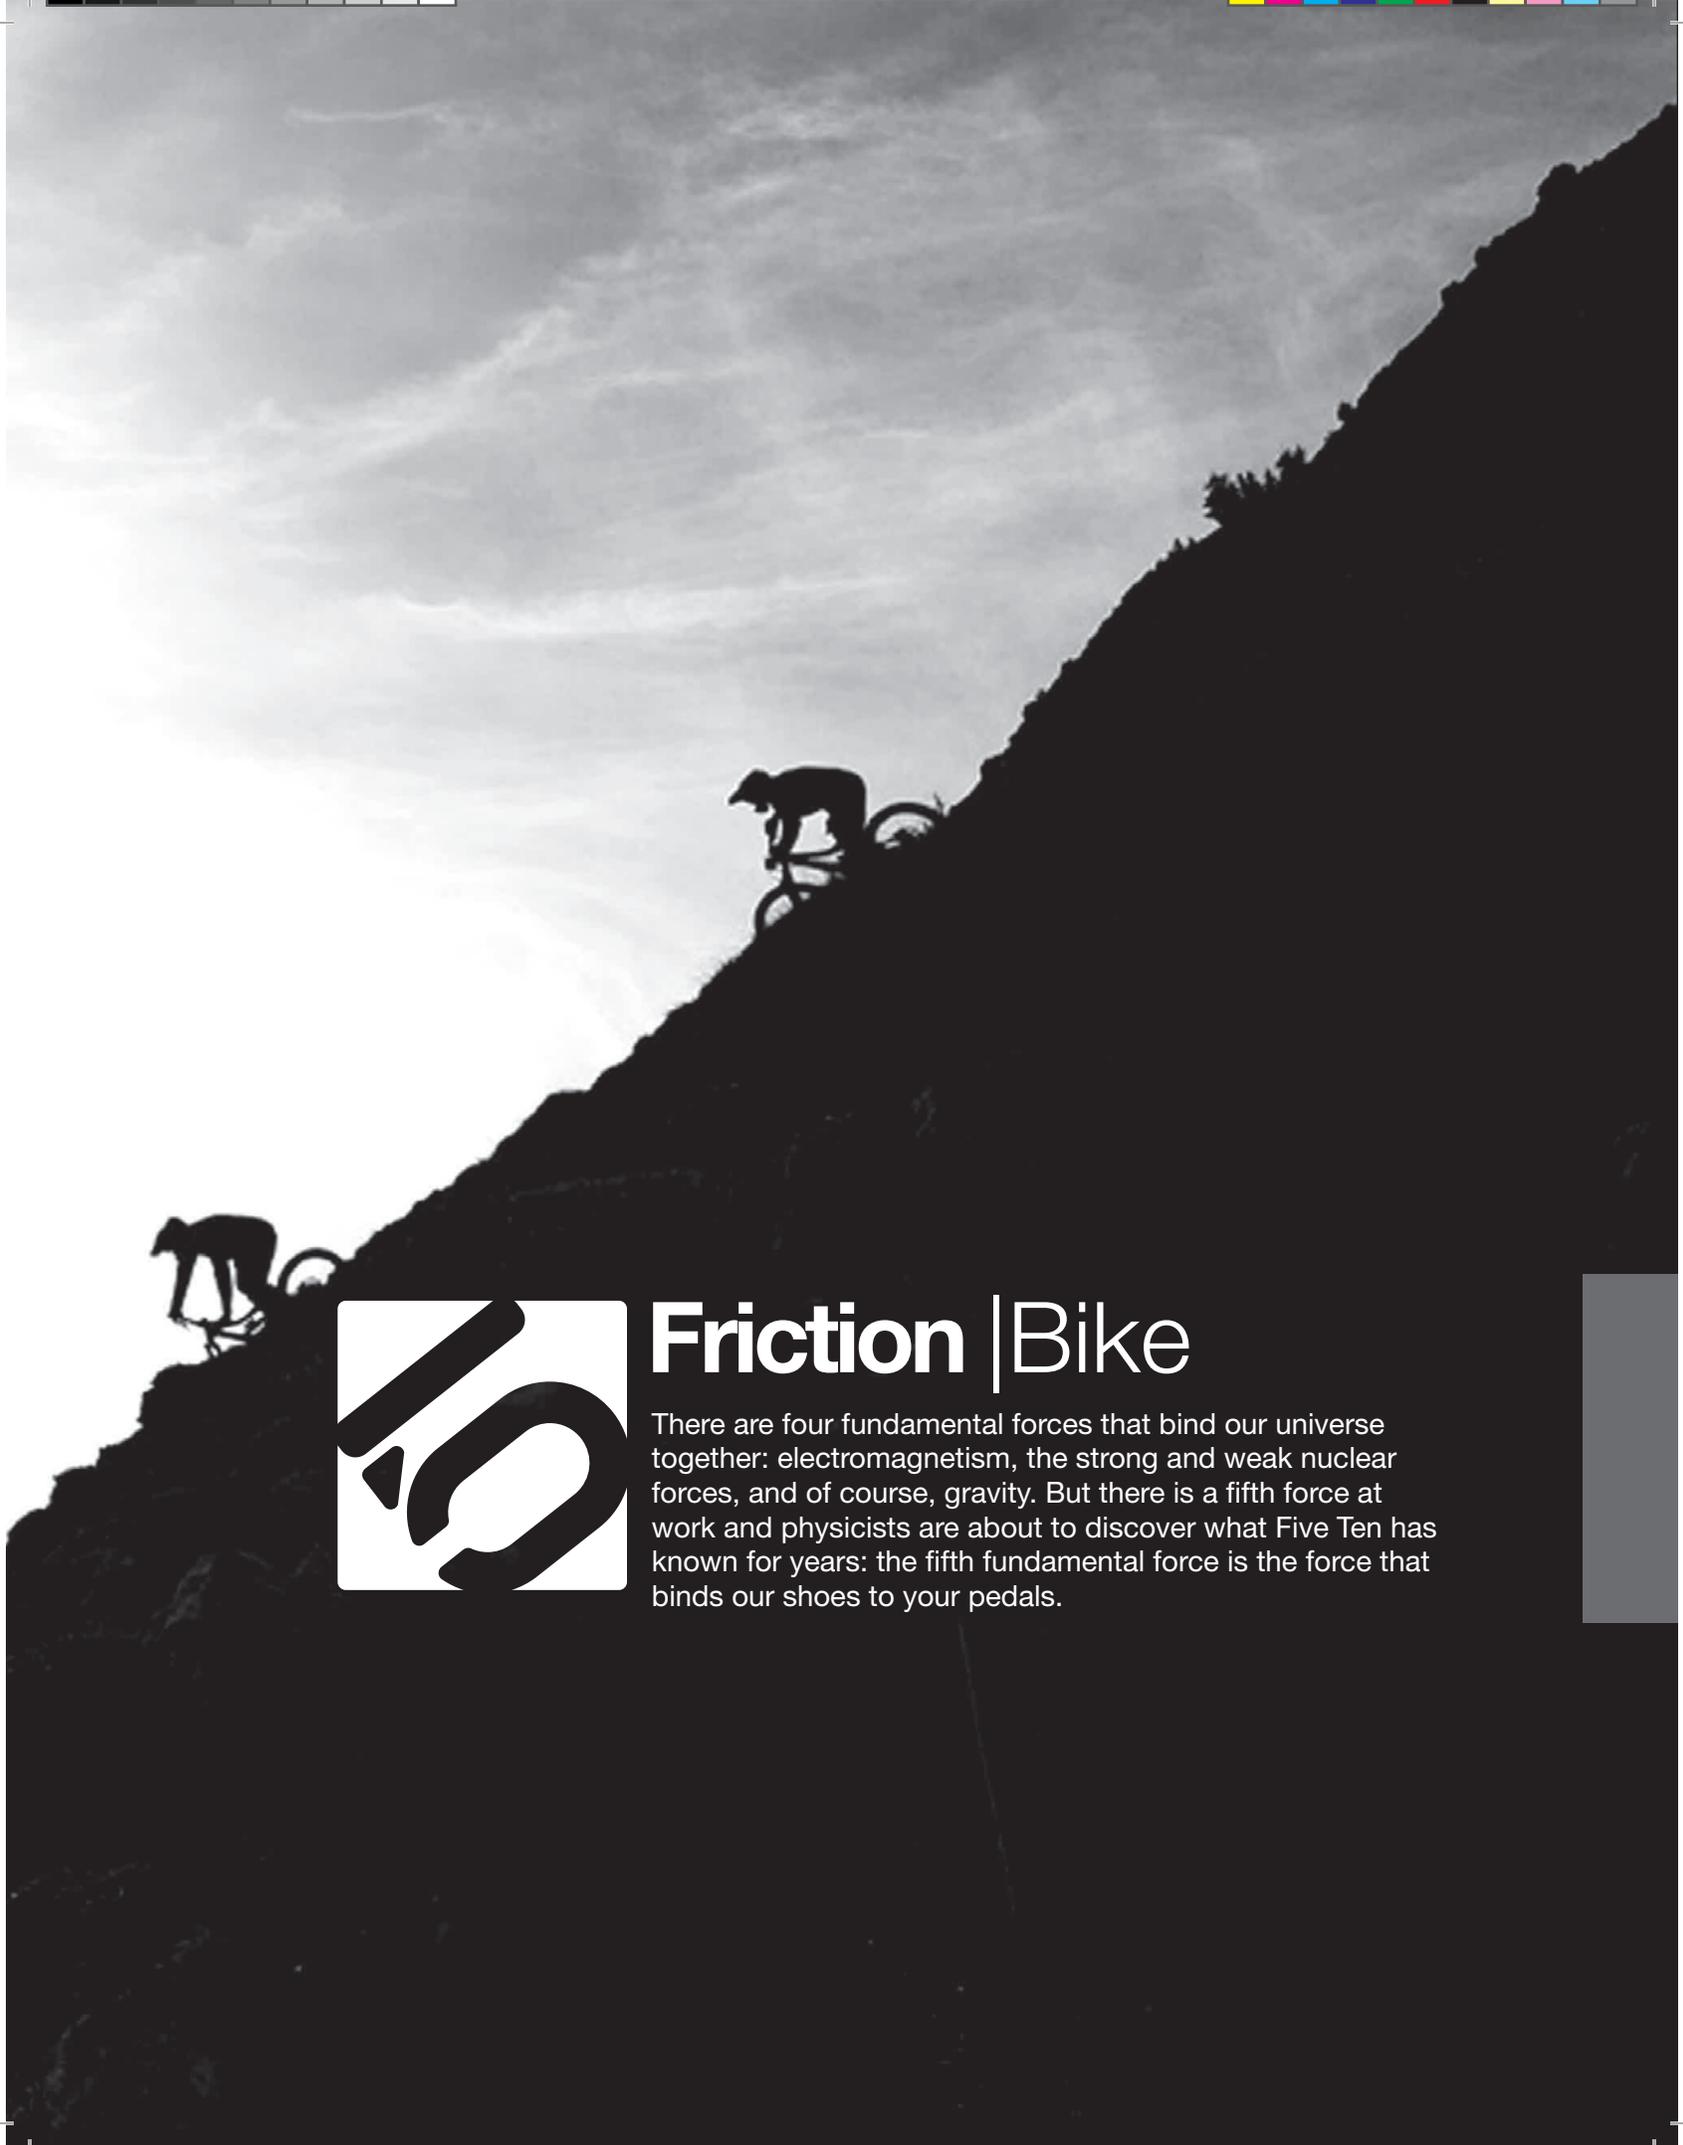

- 5 TPU Midsole**
The TPU Midsole allows for extra dampening and shock absorption on hard impacts and jumps.
- 6 Medial Instep Arch Support**
Gives extra support in your foot arch region which reduces strain and slippage inside the shoe.
- 7 5mm Outsole Thickness**
The S1 Outsole provides extra dampening, shock absorption, and durability. Allows for maximum foot to pedal feeling without sacrificing rubber wear durability

*Stealth Contact only available on Freerider VXi. Check Page 39 for product info.

Friction | Bike

There are four fundamental forces that bind our universe together: electromagnetism, the strong and weak nuclear forces, and of course, gravity. But there is a fifth force at work and physicists are about to discover what Five Ten has known for years: the fifth fundamental force is the force that binds our shoes to your pedals.

This shoe is built for punk rock downhillers like Chris who like to pin it in all conditions. The Karver provides mid-height ankle support with moderate padding for comfort and control. The supportive action leather uppers and lace covers offer protection from the elements, and the Stealth® S1™ outsoles are the stickiest interface between pedals and feet.

SPD | Bike

In 2000 there was the invention of the Stealth rubber MTB shoe. Finally, the phrase *best thing since sliced bread* finds a legitimate home. (Taken from A Sticky Rubber History)

Then there was the Five Ten SPD, still the best thing since sliced bread.

Cyclone

5034 | US: (M) 7-12, 13 UK: (M) 6-11, 12

Finally: a high-top SPD shoe. One problem with traditional shoes and clip-in pedals is that they are mostly made of hard, slippery plastic. For this reason, Five Ten® has designed a sensitive shoe with excellent ankle support that is as comfortable for walking (and pushing) as it is for tearing down the slope.

STEALTH[®]

R U B B E R

Stealth[®] originally set out to develop a rubber that would actually improve climbing by increasing the amount of body weight rubber could bear before its bond broke away from steep rock faces. After several years of research and experimentation, Stealth[®] rubber was born. Stealth's[®] unparalleled success in the climbing world made other athletes take note. The demand for other Stealth[®] sport applications was so high that Charles Cole returned to the lab to develop additional sport-specific formulas. The development of a new formula involves years of field-testing, with some of the worlds' best athletes using these sport-specific compounds in applications from water and snow to rock and trail. Each of the rubbers in the Stealth[®] family is specially formulated to excel in specific conditions, but they all share Stealth's[®] unique blend of high friction and shock absorption. The difference between Stealth[®] and other brands on the market is obvious. Quite simply, Stealth[®] provides the best friction on earth.

C4

The world's hardest rock climbs were made possible with Stealth[®] C4™ and it's still the favorite of many top climbers. C4™ provides high friction and excellent edging.

SHORE A DUROMETER IS 76-80.

S1

The ideal compound for hiking and mountain biking shoes because it absorbs far more shock than traditional rubber outsoles. The high friction rubber is also designed for durability.

SHORE A DUROMETER IS 67-71.

Hf

Many modern rock climbs and boulder problems involve over-hanging rock. We designed HF™ rubber to enable climbers to pull in with their feet. HF™ is super sticky and conforms to the smallest edges and crystals.

SHORE A DUROMETER IS 66-70.

Am

Designed for great grip in both wet and dry conditions, Stealth Amphibia™ combines high friction with durability. Amphibia™ is ideal for canyoneering, paddle sports, boating and fishing.

SHORE A DUROMETER IS 61-65.

Aq

All major wading shoe manufacturers have switched from felt to AquaStealth™ in order to combat the potentially catastrophic Whirling Disease. Anglers also gain superior traction in wet, slick conditions.

SHORE A DUROMETER IS 68-72.

XX

ONYXX™ has unbeatable hardness for precision edging, stickiness for friction, and exceptional durability.

SHORE A DUROMETER IS 80-84.

My

A brutally tough rubber designed to be lighter weight with twice the endurance of previous rubbers. Exotic ingredients get off-the-chart marks on the PICO abrasion resistance test.

SHORE A DUROMETER IS 69-73.

Ph

Stealth Phantom™ is totally non-marking without sacrificing high-friction and durability. Non-marking rubber ensures skateboarders, freerunners and all indoor/ outdoor athletes the cloak of invisibility. Available in colors.

SHORE A DUROMETER IS 59-63.

Mi6

Mi6 has superior cushioning properties and unparalleled friction on smooth surfaces (like glass, metal, and polished rock). Stealth Mi6 rubber is truly a secret weapon for athletes who need speed, agility and sure-footedness.

SHORE A DUROMETER IS 76-80.

MN

Stealth Marathon Rubber—Stealth's solution for ultra-durability with dialed-in friction. We tuned this rubber for our BMX riders who use their feet to brake. From skate parks to urban rails, from dirt to concrete, Stealth Marathon is designed to go the distance.

SHORE A DUROMETER IS 76-80.
