

# ENTLINGGE

BERND ZANGERL

## CRASHPADS

For cover of pads we use new type of nylon fabric with special anti-slip coating and polyester fabric. The fabrics are finished by double PU coating. The texture of fabrics is water-proof and abrasion-proof. To withstand years of falls, the pads are built with double-stitched seams and rounded corners. Carry harness can be adjusted (harness on the back or over the shoulder) on any type of crash pad. Anatomical carry handle - comfortable to grip and in case of fall no danger of sticking leg in it. All types of crash pads are equipped with unbreakable dural buckles.

### Fuse

Our smallest two parts pad, the Fuse is constructed with 30 mm top layer of closed-cell foam and 50 mm high quality open-cell foam. Perfect for women or boulderers with small cars. Fit for use on circuits in Bleau. Ideal as your second pad.

Dimension: 110x90x8 cm  
Weight: 3,5 kg

### Totem

It is our taco style pad. The Totem is an excellent all-around pad with a large carrying capacity. Built with 70 mm bottom layer of open-cell foam for energy absorption and 20 mm top layer of closed-cell foam.

Dimension: 120x100x9 cm  
Weight: 4,5 kg

### Joker

Pure and simple serious padding. The new Joker is without flaps. For inside filling we use 60 mm bottom layer of open-cell foam and 30 mm top layer of closed-cell foam for force dissipation.

Dimension: 130x100x9 cm  
Weight: 5,4 kg

### Fatman

Legendary three parts pad. Our best-seller crash pad. The new Fatman is thicker, 70 mm bottom layer of open-cell foam and 30 mm top layer of closed-cell foam. Small for transport and large for landing zone.

Dimension: 150x100x10 cm  
Weight: 6,5 kg

### Buffer

The highball pad made from three layers of foams, 60 mm bottom layer of open-cell high density foam, 30 mm middle layer of open-cell low density foam and 30 mm top layer of closed-cell foam. This composition of foams is a great energy absorbent. The Buffer has got flaps for safety if carrying things inside.

Dimension: 150x110x12 cm  
Weight: 8,4 kg

### Runway

The mega-size three parts highball crash pad gets a new look and dimensions. For the new Runway we use the same system of filling like for the Buffer, 30 mm top layer of closed-cell foam, 30 mm middle layer of open-cell low density foam and 60 mm bottom layer of open-cell high density foam. The Runway is created for the most demanding boulderers.

Dimension: 180x110x12 cm  
Weight: 9 kg

## BOULDERACCESSORIES

### B9 pants

Jeans which you can use for comfortable bouldering and party.

Fabric: denim 100% cotton
